

Eliza Tsitoura is a senior Post Doctoral researcher in the Laboratory of Molecular and Cellular Pulmonology at the Medical School of the University of Crete. She graduated from the Biology Department of the University College of London in 1995, and received her PhD in 2003 from the Biological Chemistry Department of the Medical School Microbiology Department of the Hellenic Pasteur Institute. Her research during her PhD thesis and two consecutive Post-Doctoral positions, in the Laboratories of Molecular Genetics of herpes simplex virus type 1 (HSV-1), at the University Claude Bernard-Lyon I, and Molecular Virology at the Hellenic Pasteur Institute of Athens, focused on the development of recombinant herpes simplex viral vectors and their interaction with the innate antiviral immune system in fibroblasts and dendritic cells. She is currently working on the role of alveolar macrophages in the pathogenesis of Idiopathic pulmonary fibrosis and the characterization of BAL cells. She has 21 publications in peer reviewed International Journals, collectively cited 117 times. She is the recipient of pre- and post-doctoral scholarships from Association Française contre les Myopathies (2002 and 2003) and Recipient of Hellenic Thoracic Society Research Grant (1015).
